

To provide effective, affordable and compassionate chemical dependency treatment to those suffering from substance use disorders.

Wright Path Recovery Center is committed to raising the bar of outpatient addiction treatment services by way of implementing a broad,

solution-based platform geared toward long-term positive results. We treat the WHOLE person, thereby touching upon all the elements affecting one's life and one's addiction.

We strongly encourage craving reduction medications, if medically indicated and we utilize motivational enhancement and cognitive- based therapy to help each person move through the stages of change necessary to develop a new way of living. Finally, we are committed to helping people change their lives by helping them overcome their addictions and by developing the necessary skills to prevent relapse.

We accept most insurance providers and participate in medicare, as well as medicare private HMOs such as Anthem, Aetna, Humana, Buckeye; medicaid and medicaid HMOs such as Molina, United Healthcare Community plan and Buckeye. We also accept all other Private plans like Anthem, Aetna, United Health Care, Cigna, Medical Mutual, Humana, Medical Mutual. We regretfully don't accept CareSource.

We have large group of 4 Board Certified Addiction Specialists, 5 other physicians, 3 Certified Nurse Practitioners and 2 other Physician Assistants with waiver certification.

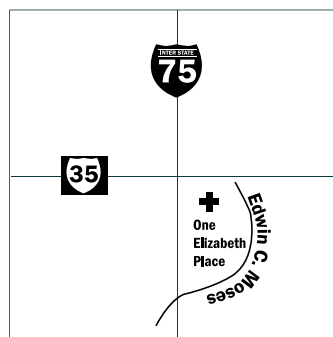

Convenient Same Day Care: We provide office visit and counselling services on the same day and conveniently provide most of the office visits on a weekly and bi-weekly basis.

Saturday Appointments: For the convenience of our working patients, we offer Saturday office visits by special appointment.

Behavioral Health & Counseling: Services are offered by two experienced providers - Dr. Vraj Chauhan PhD, LPCC & Randy Young, MS, LICDC. They're supported by a team of three other counselors.

Yours Sincerely,
Krishna B. Reddy, MD, FACA, FACPM, DABAM, DAPM

OUR PRIMARY OBJECTIVE

At the Wright Path Recovery Center we look closely at the whole picture surrounding one's addiction and address each with one goal in mind, that being the highest likelihood for achieving long-lasting, meaningful sobriety.

TAKING THE RIGHT PATH

The downward spiral of addiction and dependence to prescription narcotics and heroin can destroy relationships, jeopardize employment and damage physical and mental health.

Opioid use disorder is a disease. As like any other chronic disease, it should be treated aggressively so patients can return to life without addiction.

The Wright Path Recovery Center is an outpatient treatment center for opioid use disorder. We provide integrative clinical and mental health services for men & women ages 18 and older.

Addiction Treatment

Commonly Abused Drugs

Oxycontin	NORCO, Cocaine and Fentanyl
Methadone	Heroin, Lortab, Alcohol
Hydrocodone	Oxycodone, Morphine
Fentanyl	Amphetamine, Heroin, Fentanyl

What We Offer

Suboxone for Opioid use disorder

SUBOXONE (buprenorphine) at the appropriate dose may be used to reduce illicit opioid use and help patients stay in treatment by suppressing symptoms of opioid withdrawal and decreasing cravings for opioids.

Outpatient Treatment Program

Designed for those whose lives are becoming dramatically affected by drug abuse.

THE FIRST STEPS

Intake: All programs begin with an initial physician visit at our Dayton Office. A thorough and comprehensive interview and exam is completed to determine the appropriate dosing protocol for your case. The induction appointment will be scheduled at this time.

Induction Phase: The introduction of opioid dependence medications like Suboxone, is called an "induction" which last 1-3 hours. The patient must be in a moderate state of withdrawal before the induction, but will feel much better by the time they leave the office. We believe that the first 24-72 hours are critical so we would like patients to be in close communication to the team during that period.

Stabilization and Counseling Phase: Over the next 1-3 months weekly visits are necessary to monitor medication doses and modify if necessary to alleviate any discomfort. Mental health counseling will begin to address the psychosocial issues of opioid dependence. Psychosocial rehabilitation is crucial part of recovery and is offered through individual and group sessions.

Maintenance Phase: 3-9 Months. The physician in collaboration with the patient and the treatment team will determine the frequency of visits during this period. It is our belief that six to twelve months is the average duration of treatment recommended for opiate addiction.

Medically Supervised Withdrawal Phase: 9-12 Months. As with any addiction treatment it is important to transition each patient from intensive clinical treatments to a sober living free from addiction. With favorable input from your counselor, your physician will implement a plan to gradually taper from any opioid dependence medications. We look forward to helping achieve your goal of conquering your dependence.

Relapse Prevention: It is recommended that all patients be enrolled in an ongoing relapse prevention program. Just as it is the case with any chronic relapsing disease, future exacerbation of the disease can occur. It is very important that after we establish remission of the disease, patients should continue to undergo treatment whether is one of our programs or in a different program while they watch for any signs of relapse. If any of these occur, patients are instructed to contact us immediately so that we can work with them to prevent a relapse.

OUR STAFF

The Wright Path Recovery Center program has been developed by Board certified Physicians, Dr. Kris Reddy, MD, FACA, FACPM, DABAM, DAPM, S. Erragolla, M.D., J. Gouda, M.D., who are Board certified respected leaders in Addiction Medicine.
